Three Reasons
to get your Flu Shot

Every year the influenza virus hospitalizes approximately 200,000 Americans, kills more than 36,000 and can keep you sick in bed for up to two weeks or more. **That's why the Centers for Disease Control (CDC) recommends that all healthy people 6 months and older get vaccinated.**

1.

Getting vaccinated is the *single best way* to help prevent Influenza.

According to the Centers for Disease Control and Prevention (CDC), Studies have shown that the flu vaccine is up to 90% effective in preventing the flu, and drastically reduces flu symptoms and complications in those who get the flu.

2.

You can get the flu and easily pass it on to others *before you even know that you have it!*

By getting your flu shot, you will stop the virus in its tracks and protect your family, friends and co-workers from the flu.

3.

Getting Influenza could cause you to be *sick in bed for up to 2 weeks.*

Flu could cost you lost time from work, lost wages, lost vacation time and extra medical expenses.
