Flu Vaccines

With Covid-19 still a concern, flu vaccines are as critical as ever to maintain optimal health. Additionally, it's becoming increasingly apparent that when compared to doctors' offices, urgent care, and pharmacies, ***corporate offices may be the safest place to receive these critical vaccinations.***

According to the Centers for Disease Control:

- Flu vaccination can keep you from getting sick with flu.
- Flu vaccination has been shown in several studies to reduce the severity of illness in people who get vaccinated but still get sick.
- Flu vaccination can reduce the risk of flu-associated hospitalization.
- Flu vaccination is an important preventive tool for people with certain chronic health conditions.
- Flu vaccination during pregnancy helps protect pregnant people from flu during and after pregnancy and helps protect their infants from flu in their first few months of life.

Get your flu shot to keep yourself and the people around you healthy.
